

Project Initialization and Planning Phase

Date: 14 July 2026 **Team ID:** **Project Name:** Emotion Detection and Learning Support Engine

Define Problem Statements

Many students experience emotions such as stress, fear, frustration, confusion, or low motivation while learning. Traditional learning platforms provide the same learning experience to every student without understanding their emotional state. As a result, students may lose confidence, struggle to concentrate, or discontinue learning. There is a need for an intelligent system that can recognize a learner's emotions from text input and provide personalized learning guidance to improve engagement, motivation, and learning outcomes.

Problem Statement Table

I am (Customer)	I'm trying to	But	Because	Which makes me feel
A student preparing for exams and learning new concepts.	Understand topics effectively and improve my academic performance.	I often feel confused, stressed, frustrated, or anxious during learning, and existing platforms cannot recognize my emotional state or provide personalized support.	Most learning systems treat every learner the same and do not adapt to emotional needs.	Unmotivated, overwhelmed, and less confident while learning.
